

NORAM gives exceptional structures the jewels needed to become true works of art. We're a leading architectural glazing and aluminium fabricator offering total contract glazing and curtainwall services. Over two decades we have earned a reputation for meeting architectural challenges head on, providing innovative and creative solutions for commercial, institutional, and industrial projects.

We offer all services and staff required to get the job done. This allows NORAM to control all aspects of our projects – from start to finish – maintaining quality control and high levels of operational efficiency. Our in-house staff includes professional design engineers, project managers, fabricators, and installers.

Products & Services |

For new or retrofit projects, NORAM engineers and contractors design and install customized glass solutions, including curtainwalls, windows, skylights, wall cladding systems, aluminium composite panels, and complete entrance systems. As a proud member of the Canadian Green Building Council (CGBC), our products and services can contribute to sustainable development and projects achieving LEED® certification.

Design & Engineering |

Our design and engineering team work alongside architects, contractors, and building owners alike to achieve desired structural and aesthetic requirements. From complete design to outstanding improvements, we possess the expertise it takes to create a visually striking and uniquely creative glazing system.

Project Management |

Our projects progress exactly as planned thanks to our dedicated project managers. While our PMs take care of all details from staffing, product delivery, installation scheduling, and budget maintenance, they also provide direct contact to your project at every step of the way. It's a single contact responsibility and it ensures immediate and easy communication at all times.

Fabrication |

We have some of the best fabricators in the industry who work in our advanced 40,000 square foot facility. We design, fabricate, and test project components all under one roof. Testing occurs at every stage of the process so that nothing leaves our facility until it is triple checked, meeting our exacting requirements for both safety and quality. Our projects are fabricated to the highest industry safety standards and NORAM quality expectations.

Installation |

NORAM has specialized installation crews; each highly trained with unique skill sets to install all of our products and fabrications. Dedicated to progress, our installation technicians upgrade their skills regularly learning new techniques and applications to stay ahead of trends and streamline the installation process.

+ SYNERGY

+ The phenomenon in which two or more discrete influences work together to create a greater effect than the individual influences could achieve on their own.
 NORAM works with clients to achieve this directive.

+ HARMONY

+ A balanced, pleasing, or suitable arrangement of parts.
 NORAM believes that the sum is greater than the parts. All projects are designed to instill harmony and cohesiveness.

+ COLLABORATION

+ To work together, especially in a joint intellectual effort.
 NORAM works with its partners in fulfilling projects' demands.
